

power of intelligence

■ PLANET_IL - intelligent recognition

PLANET_IL is an automated shipment detecting solution with up to 4 dispatching stations for private mail service providers.

It recognizes intelligent addresses, barcodes and labels on mail items such as letters, packages and envelopes.

The shipment format, weight, customer and recipient are automatically detected and decoded to the carrier or route via your archived carrier database.

Archived images and data can be used for track and trace, statistics and billing.

Benefits:

- Combined shipment task: mixed mail up to 16 mm, manually up to 50 mm
- Automatic recognition of address data or barcodes, determination of format and weight
- Labels printed with a logo, barcode and carrier number
- Online- and offline videocoding for unread or uncertain data
- Archiving of images and data

- rate before videocodin
